

## Marine electro-mechanical technician m/f

Marine electro-mechanical technician m/f

### Job and assignments

Marine electro-mechanical technicians perform maintenance or repairs on the ship's propulsion machines and generators.

Onboard, they operate equipments and gears (start up, use, monitor, stop) and maintain machines and gears in various areas: electricity, mechanics, hydraulics, refrigeration...

### Work environment

The job is performed at shipyards, within mechanical workshops or aboard ships. There are frequent onsite visits to holds and aboard docked or sailing vessels. There may be night or weekend duty when serious and urgent actions are needed. Wearing PPE and complying with safety regulations is required.

### Inter-personal and expert skills

- You have skills in hydraulics, pneumatic systems, machining, diesel engines, electricity...
- You are multi-tasking
- You have a good command of technical English
- You can read and understand diagrams and mechanical systems drawings
- You are methodical and diligent
